

Almarin presents at IALA Conference 2018

The International Association of Marine Aids to Navigation and Lighthouse Authorities (IALA) will hold its prestigious quadrennial IALA Conference from 27 May to 2 June in Incheon (Republic of Korea).

Almarin, an IALA industrial member, will exhibit and present its latest development in marine aids to navigation for the marking of rivers.

This innovative buoy (*illustrated*), which works as a fixed and floating mark, is designed for rivers or channels with a large amplitude of water level variation while maintaining a high precision when water levels are low.

This product has been developed by Almarin in conjunction with the Port Authority of Douro e Leixões (APDL) and Instituto Hidrográfico de Portugal.

The project has also been selected for presentation under the IALA conference's innovation section and will be presented by Almarin's general manager and technical director, Patrick Lindley.

Almarin will also present its new aids to navigation catalogue, with a wide offering of beacons and towers for ports, lanterns and provision for the marking of bridges and structures in navigable channels.

About Grupo Lindley

Grupo Lindley, with more than 85 years of experience in the supply and manufacture of equipment and infrastructure for harbour and industrial areas, is formed by four privately owned companies established in 1930:

- Ahlers Lindley: Marina and Harbour Infrastructure;
- Almovi: Lifting Systems and Cargo Handling Equipment;
- Salt Technologies: Analysis and Design of Marine Structures;
- Almarin: Marine Aids to Navigation.
