

Schiphol, a Collaborative Decision Making airport

The EUROCONTROL Network Manager has welcomed Amsterdam Schiphol Airport as the 28th full A-CDM (Airport – Collaborative Decision Making) airport.

Amsterdam Schiphol is the last major hub airport in Europe to be connected to the Network Manager (NM) systems. It is also the first one to have used EUROCONTROL's business-to-business (B2B) web services from the start.

Now that Amsterdam Schiphol is fully A-CDM, the amount of traffic sending departure planning information (DPI) in the EUROCONTROL zone reaches 45%. NM is already working with a number of airports in anticipation of arriving at the 50% margin.

Congratulations have been sent by EUROCONTROL to colleagues at Schiphol Airport that have made a major effort to make this happen, working jointly with the operating airlines, LVNL and the EUROCONTROL NM team to make this happen.

To learn more about A-CDM readers are invited to watch an informative video produced by Amsterdam Schiphol Airport here:
