

# 29<sup>th</sup> Saint Petersburg International Conference on Integrated Navigation Systems

30 May – 1 June 2022

The 29<sup>th</sup> Saint Petersburg International Conference on Integrated Navigation Systems will be held by the State Research Center of the Russian Federation – Concern Central Scientific and Research Institute Elektropribor, JSC (St. Petersburg, Russia) on **30 May - 1 June 2022**.

This annual Conference has become a traditional event for scientists and engineers from all over the world involved in navigation and motion control to share the results of their investigations and discuss prospects for the future.

## Conference Topics

- Inertial sensors, navigation and orientation systems
- Integrated navigation and control systems for moving objects
- Global navigation satellite systems
- Gravimetric aids to navigation

Each topic covers the following aspects:

- ❖ equipment design features;
- ❖ methods and algorithms;
- ❖ application specific features (aerospace, marine, surface, underground);
- ❖ testing and metrology.

**Please note: *The Conference does not cover issues related to military and technical cooperation, development of military technologies and weapons.***

The Program Committee especially welcomes overview papers. It also eagerly accept papers authored by young researchers (under 35 years old).

All presentations at the Conference are held in English or Russian and are interpreted.
